

GHD Global Help Desk ATV71 on Profibus with Siemens CPU 315-2 PN/DP

Configuration with TIA Portal V11

11/2012

SIEMENS Totally Integrated Automation **PORTAL V11**

© Siemens AG, 2008-2011

The image is a dark blue banner with a faint grid pattern. It features the Siemens logo in the top left, the text 'Totally Integrated Automation PORTAL V11' in the top right, and three central images: a Schneider ATV71 inverter on the left, the PROFIBUS logo in the center, and a Siemens CPU 315-2 PN/DP on the right. A copyright notice '© Siemens AG, 2008-2011' is located in the bottom right corner of the banner.

Using of PKW to read and write drive parameters.....	13

The goal of this document is to describe the configuration of ATV71 on Profibus with Siemens CPU 315-2 PN/DP with TIA Portal V11.

Network Topology used for this example

ATV71 configuration

Telegram Overview

The Profibus DPv1 card (**VW3A3307S371**) for Altivar 61 / 71 drives only supports types 3, 4, 5 and 8 PPO format (Parameter-Process Data-Object)

	PKW length (word)				PZD length (word)									
	1	2	3	4	1	2	3	4	5	6	7	8	9	10
PPO type 1														
PPO type 2														
PPO type 3														
PPO type 4														
PPO type 5														
PPO type 6														
PPO type 7														
PPO type 8														

PPO cyclic frames contain the periodic variables that are used for 2 types of service:

- I/O exchanges (PZD)
- Aperiodic exchanges (PKW) for parameter setting, configuration and diagnostics

PKW aperiodic exchanges are included in the cyclic frames and do not require special frames. An aperiodic exchange is used to read or write a parameter. The Altivar 61 / 71 PKW service does not conform to Profidrive.

For PPO type 5 and 8, there are 10 PZD for input and output in the frame, but only 8 in input and 8 in output can be used with ATV71. The 2 last PZD are not used.

Drive configuration

In this example, we will configure the PPO type 5.
The cyclic data by default will be kept.

NCA1 = 8501 (CMD) NMA1 = 3201(ETA)
NCA2 = 8602 (LFRD) NMA2 = 8604(RFRD)

The drive will be configured to be command by PLC via Profibus.

Drive command menu

CHCF = SIM
FR1 = COM card

Drive Communication scanner menu

■ [COM. SCANNER INPUT]	
Only accessible via graphic display terminal	
n P A 1	<input type="checkbox"/> [Scan. IN1 address] 3201 Address of the 1 st input word.
n P A 2	<input type="checkbox"/> [Scan. IN2 address] 8604 Address of the 2 nd input word.
n P A 3	<input type="checkbox"/> [Scan. IN3 address] 0 Address of the 3 rd input word.
n P A 4	<input type="checkbox"/> [Scan. IN4 address] 0 Address of the 4 th input word.
n P A 5	<input type="checkbox"/> [Scan. IN5 address] 0 Address of the 5 th input word.
n P A 6	<input type="checkbox"/> [Scan. IN6 address] 0 Address of the 6 th input word.
n P A 7	<input type="checkbox"/> [Scan. IN7 address] 0 Address of the 7 th input word.
n P A 8	<input type="checkbox"/> [Scan. IN8 address] 0 Address of the 8 th input word.
■ [COM. SCANNER OUTPUT]	
Only accessible via graphic display terminal	
n C A 1	<input type="checkbox"/> [Scan.Out1 address] 8501 Address of the 1 st output word.
n C A 2	<input type="checkbox"/> [Scan.Out2 address] 8602 Address of the 2 nd output word.
n C A 3	<input type="checkbox"/> [Scan.Out3 address] 0 Address of the 3 rd output word.
n C A 4	<input type="checkbox"/> [Scan.Out4 address] 0 Address of the 4 th output word.
n C A 5	<input type="checkbox"/> [Scan.Out5 address] 0 Address of the 5 th output word.
n C A 6	<input type="checkbox"/> [Scan.Out6 address] 0 Address of the 6 th output word.
n C A 7	<input type="checkbox"/> [Scan.Out7 address] 0 Address of the 7 th output word.
n C A 8	<input type="checkbox"/> [Scan.Out8 address] 0 Address of the 8 th output word.

PLC configuration

PLC configuration

- ❖ Create a new project

Create new project

Project name:

Path: ...

Author:

Comment:

- ❖ Configure the device

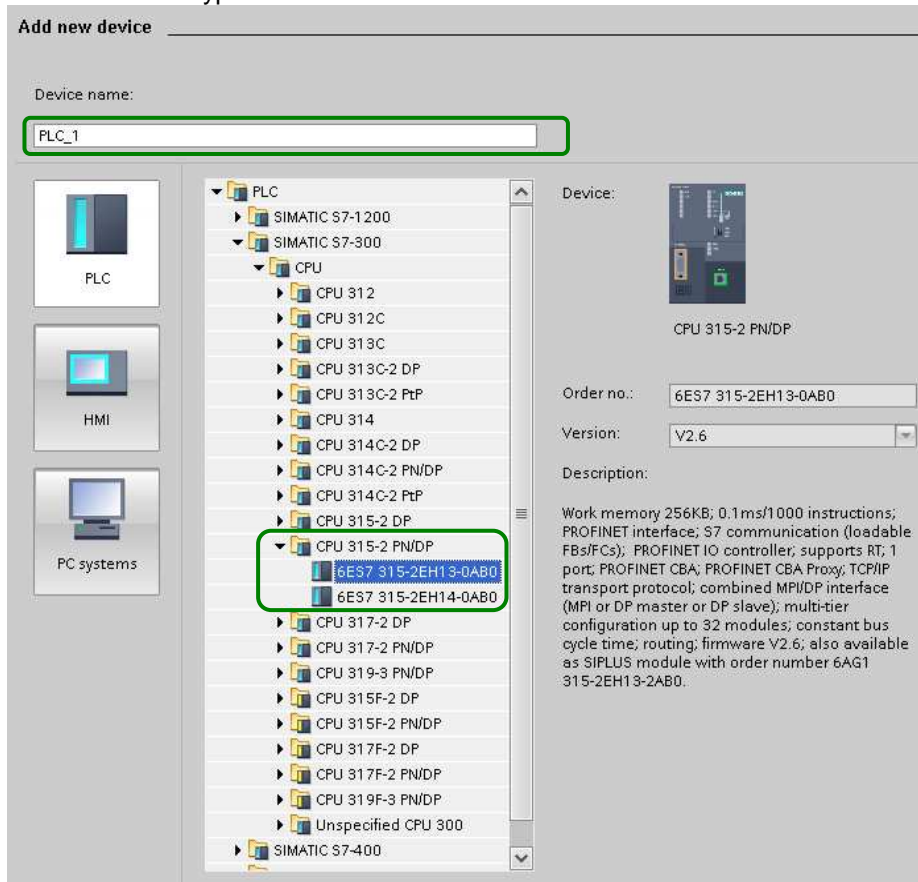

- ❖ Add a new device

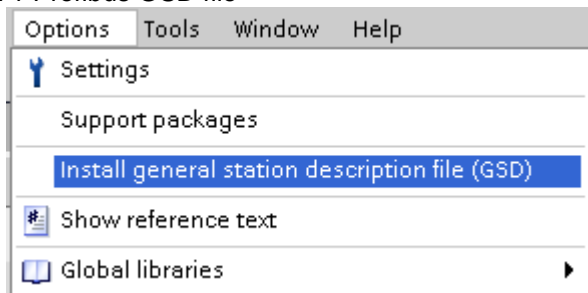

❖ Select the PLC type

❖ Add the ATV71 Profibus GSD file

Follow the instruction to add the GSD file

Note:

For the ATV71 we have 2 type of Profibus card.
It's important to use the GSD file corresponding to your Profibus card.

- **Profibus DPV0 card (ref : VW3A3307)**

- **Profibus DPV1 card (ref : VW3A3307S371)**

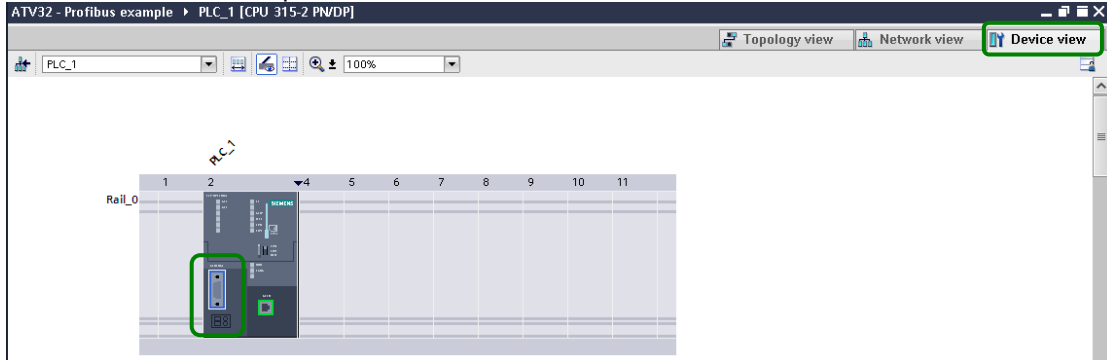

If you don't use the GSD file in relation with your card reference, the network will not work.

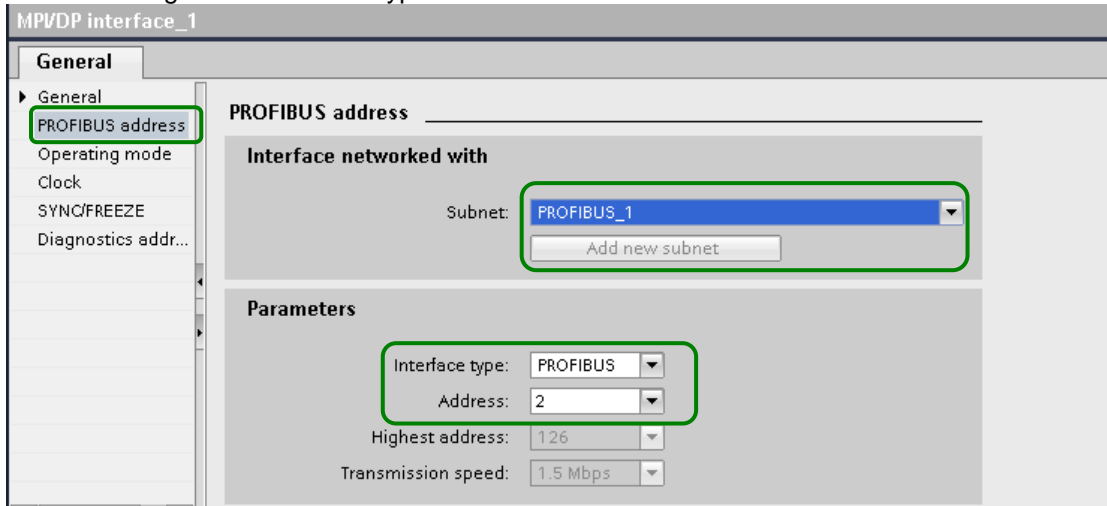

❖ Configure the DP port

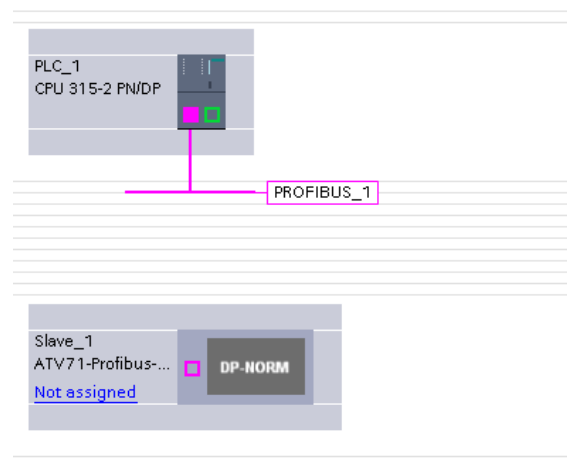

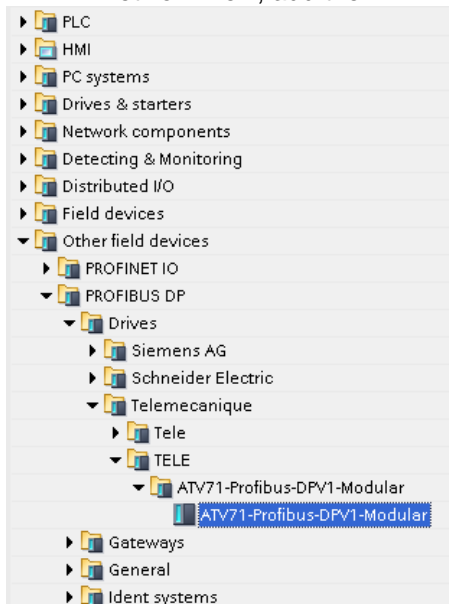

Double click on the DP port

❖ Configure the interface type to Profibus and add a new subnet

❖ In network view, add the ATV71 device from catalogue

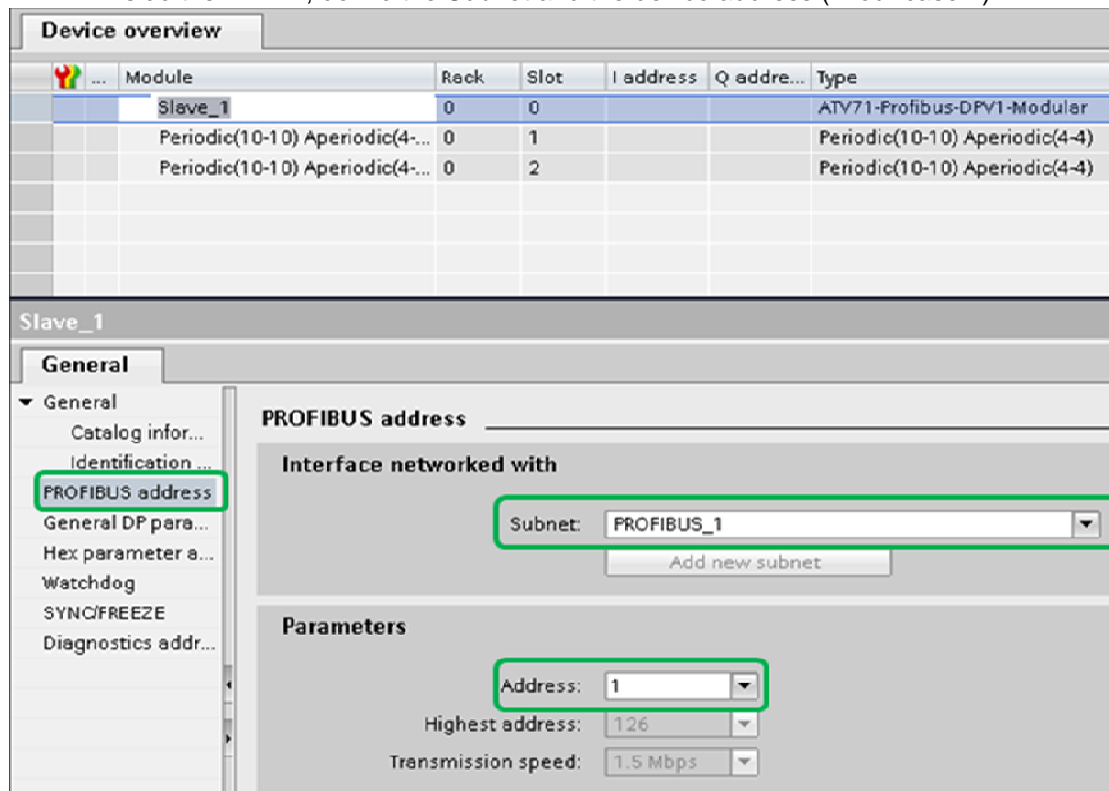

- ❖ In the ATV71 device view, we select the Telegram to be used
Here PPO type 5 – 4 aperiodic and 10 periodic

We have now the ATV71 and his telegram configured.

Device overview									
...	Module	Rack	Slot	I address	Q address...	Type	Order no.	Firmware	
	Slave_1	0	0			ATV71-Profibus-DPV1-Modular		V1.2	
	Periodic(10-10) Aperiodic(4-...	0	1			Periodic(10-10) Aperiodic(4-4)			
	Periodic(10-10) Aperiodic(4-...	0	2			Periodic(10-10) Aperiodic(4-4)			

- ❖ Inside the ATV71, define the Subnet and the device address (in our case 1)

Device overview

...	Module	Rack	Slot	I address	Q address...	Type
	Slave_1	0	0			ATV71-Profibus-DPV1-Modular
	Periodic(10-10) Aperiodic(4-...	0	1			Periodic(10-10) Aperiodic(4-4)
	Periodic(10-10) Aperiodic(4-...	0	2			Periodic(10-10) Aperiodic(4-4)

Slave_1

General

- General
- Catalog infor...
- Identification ...
- PROFIBUS address**
- General DP para...
- Hex parameter s...
- Watchdog
- SYNCFREEZE
- Diagnostics addr...

PROFIBUS address

Interface networked with

Subnet: PROFIBUS_1

Add new subnet

Parameters

Address: 1

Highest address: 126

Transmission speed: 1.5 Mbps

- ❖ The cyclic exchange have to be configured in the drive (in communication scanner menu)

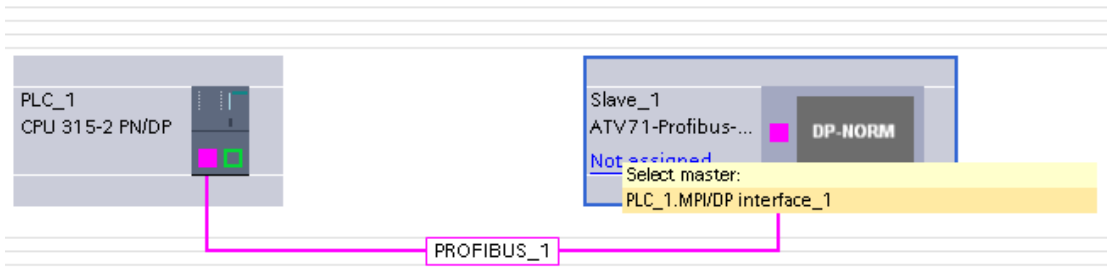

NCA1 = 8501 (CMD)
NCA2 = 8602 (LFRD)

NMA1 = 3201(ETA)
NMA2 = 8604(RFRD)

Here we kept the default value, but drive parameter can be added in empty field.

❖ In the network, view assign the PLC1 as master for the ATV71
Click on “Not assigned” in ATV71 and select the PLC interface

The ATV71 is now link and the Telegram address Input and output is defined.

The I address and O address for the PPO type 5 are define

Module	Rack	Slot	I address	Q address	Type	Order no.	Firmware	Comment
Slave_1	0	0	2044*		ATV71-Profibus-DP-V1-Modular		V1.2	
Periodic(10-10) Aperiodic(4-4)	0	1	256..263	256..263	Periodic(10-10) Aperiodic(4-4)			
Periodic(10-10) Aperiodic(4-4)	0	2	264..283	264..283	Periodic(10-10) Aperiodic(4-4)			

❖ Add OB block to avoid PLC stop in case of rack fault of I/O fault.

We will add OB82 and OB86

❖ Create PLC tag
Add a new PLC tag and rename it

The PPO type 5 input / output began at address 256

Device overview						
...	Module	Rack	Slot	I address	Q address...	Type
	Slave_1	0	0	2044*		ATV71-Profibus-DPV1-Modular
	Periodic(10-10) Aperiodic(4-...	0	1	256...263	256...263	Periodic(10-10) Aperiodic(4-4)
	Periodic(10-10) Aperiodic(4-...	0	2	264...283	264...283	Periodic(10-10) Aperiodic(4-4)

The PKW part will be 256 up to 263 and cyclic exchange (NCAx and NMAx) will be 264 up to 282.

The PLC TAG are now define

ATV71 PPO type 5						
	Name	Data type	Address	Retain	Visibl...	Acces...
1	Input_PKE	Word	%IW256		<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
2	Input_R/W	Word	%IW258		<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

19	NCA3	Word	%QW268		<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
20	NCA4	Word	%QW270		<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
21	NCA5	Word	%QW272		<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
22	NCA6	Word	%QW274		<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
23	NCA7	Word	%QW276		<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
24	NCA8	Word	%QW278		<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

Even if in this table we have a monitoring mode, it's does not allow monitoring and using the input and output.

To do monitoring and writing of telegram, we have to use the "Watch and Force" table.

- ❖ Create a new table and rename it.

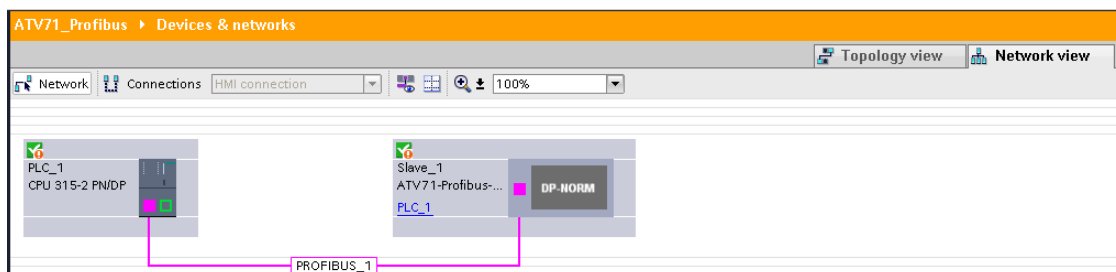

Inside this table we will add the tag define previously but we special syntaxes for using. We add the same tag name but in adding **":p"** at the end.

	i	Name	Address	Display format	Monitor value	Modify value	
1		"Input_PKE":P	%IW256:P	Hex			<input type="checkbox"/>
2		"Input_R/W":P	%IW258:P	Hex			<input type="checkbox"/>
3		"Input_PWE1":P	%IW260:P	Hex			<input type="checkbox"/>
4		"Input_PWE2":P	%IW262:P	Hex			<input type="checkbox"/>
5		"NMA1 (ETA)":P	%IW264:P	Hex			<input type="checkbox"/>
6		"NMA2 (RFRD)":P	%IW266:P	Hex			<input type="checkbox"/>
7		"NMA3":P	%IW268:P	Hex			<input type="checkbox"/>
8		"NMA4":P	%IW270:P	Hex			<input type="checkbox"/>
9		"NMA5":P	%IW272:P	Hex			<input type="checkbox"/>
10		"NMA6":P	%IW274:P	Hex			<input type="checkbox"/>
11		"NMA7":P	%IW276:P	Hex			<input type="checkbox"/>
12		"NMA8":P	%IW278:P	Hex			<input type="checkbox"/>
13		"Output_PKE":P	%QW256:P	Hex			<input type="checkbox"/>
14		"Output_R/W":P	%QW258:P	Hex			<input type="checkbox"/>
15		"Output_PWE1":P	%QW260:P	Hex			<input type="checkbox"/>
16		"Output_PWE2":P	%QW262:P	Hex			<input type="checkbox"/>
17		"NCA1 (CMD)":P	%QW264:P	Hex			<input type="checkbox"/>
18		"NCA2(LFRD)":P	%QW266:P	Hex			<input type="checkbox"/>
19		"NCA3":P	%QW268:P	Hex			<input type="checkbox"/>
20		"NCA4":P	%QW270:P	Hex			<input type="checkbox"/>
21		"NCA5":P	%QW272:P	Hex			<input type="checkbox"/>
22		"NCA6":P	%QW274:P	Hex			<input type="checkbox"/>
23		"NCA7":P	%QW276:P	Hex			<input type="checkbox"/>
24		"NCA8":P	%QW278:P	Hex			<input type="checkbox"/>

At this step the configuration is done. We can compile and download the program to the PLC.

Result after Download and connect:

Monitor and command the ATV71

When the monitoring is activated

We can see the ATV71 status word NMA1 = 16#250

	i	Name	Address	Display format	Monitor value	Modify value	
1		"Input_PKE":P	%IW256:P	Hex	16#0000		
2		"Input_RW":P	%IW258:P	Hex	16#004E

23		"NCA7":P	%QW276:P	Hex			
24		"NCA8":P	%QW278:P	Hex			
25		<Add new>					

Start the Drive

With PPO type 5, the drive follow the CIA 402, so to start we need to give a speed reference (in NCA2) and send the value, 16#6, 16#7 and then 16#F in the NCA1.

To send a value, write it and with right click on it, select Modify now.

"NCA1 (CMD)":P	%QW264:P	Hex		16#0006		
"NCA2 (LFRD)":P	%QW266:P	Hex		16#0300		
"NCA3":P	%QW268:P	Hex				
"NCA4":P	%QW270:P	Hex				
"NCA5":P	%QW272:P	Hex				
"NCA6":P	%QW274:P	Hex				
"NCA7":P	%QW276:P	Hex				
"NCA8":P	%QW278:P	Hex				
	<Add new>					

Modify	
Modify to 0	Ctrl+Shift+0
Modify to 1	Ctrl+Shift+1
Modify now	
Modify with trigger	
Enable peripheral outputs	
Cut	Ctrl+X
Copy	Ctrl+C
Paste	Ctrl+V
Delete	Del
Rename	F2
Expanded Mode	

Step 1

I write CMD = 16#6 and LFRD = 16#300

"NCA1 (CMD)":P	%QW264:P	Hex		16#0006	<input checked="" type="checkbox"/>	
"NCA2 (LFRD)":P	%QW266:P	Hex		16#0300	<input checked="" type="checkbox"/>	

The ATV71 status word change

"NMA1 (ETA)":P	%IW264:P	Hex	16#0231	<input type="checkbox"/>	
----------------	----------	-----	---------	--------------------------	---

Step 2

I write CMD = 16#7

"NCA1 (CMD)":P	%QW264:P	Hex	16#0007	<input checked="" type="checkbox"/>	
----------------	----------	-----	---------	-------------------------------------	---

The ATV71 status word change

"NMA1 (ETA)":P	%IW264:P	Hex	16#0233	<input type="checkbox"/>	
----------------	----------	-----	---------	--------------------------	---

Step 3

Finally I write CMD = 16#F

"NCA1 (CMD)":P	%QW264:P	Hex	16#000F	<input checked="" type="checkbox"/>	
----------------	----------	-----	---------	-------------------------------------	---

The ATV71 Start. We can monitor the status word and the output speed

"NMA1 (ETA)":P	%IW264:P	Hex	16#0637	<input type="checkbox"/>	
"NMA2 (RFRD)":P	%IW266:P	Hex	16#0300	<input type="checkbox"/>	

Using of PKW to read and write drive parameters

The following table lists the controller-to-drive parameters in the input PKW area

PKW nr	PKW1	PKW2	PKW3	PKW4
PKE Name	PKE	R/W	PWE	PWE
Description	The Modbus address of the parameter is detailed here.	Request code: 0: no request 1: read 2: write	Not used	Parameter value

The following table lists the drive-to-controller parameters in the output PKW area

PKW nr	PKW1	PKW2	PKW3	PKW4
PKE Name	PKE	R/W	PWE	PWE
Description	Copy of the input PKE	Request code: 0: no request 1: read done 2: write done 7: read or write error	Not used	If the request is successful the parameter value is copied here.

Example to read ACC parameters (address 9001)

In Output PKE we write 9001 (dec)

In Output R/W we write 1 (for read request)

The result is located in Input PWE2 → 30 (for 3.0 sec)

Name	Address	Display format	Monitor value	Modify value
"Input_PKE":P	%IW256:P	DEC_unsigned	9001	
"Input_R/W":P	%IW258:P	DEC_unsigned	1	
"Input_PWE1":P	%IW260:P	DEC_unsigned	0	
"Input_PWE2":P	%IW262:P	DEC_unsigned	30	
"NMA1 (ETA)":P	%IW264:P	Hex	16#0250	
"NMA2 (RFRD)":P	%IW266:P	Hex	16#0000	
"NMA3":P	%IW268:P	Hex	16#0000	
"NMA4":P	%IW270:P	Hex	16#0000	
"NMA5":P	%IW272:P	Hex	16#0000	
"NMA6":P	%IW274:P	Hex	16#0000	
"NMA7":P	%IW276:P	Hex	16#0000	
"NMA8":P	%IW278:P	Hex	16#0000	
"Output_PKE":P	%QW256:P	DEC_unsigned		9001
"Output_R/W":P	%QW258:P	DEC_unsigned		1

Reading Result (points to 30 in Input_PWE2)

Address to read (points to 9001 in Output_PKE)

Read command (points to 1 in Output_R/W)

Example to Write ACC parameters (address 9001)

In Output PKE we write 9001 (dec)

In Output R/W we write 2 (for write request)

In Output PWE2 we write 35 (to write 3.5sec in ACC)

"Output_PKE":P	%QW256:P	DEC_unsigned		9001
"Output_R/W":P	%QW258:P	DEC_unsigned		2
"Output_PWE1":P	%QW260:P	DEC_unsigned		
"Output_PWE2":P	%QW262:P	DEC_unsigned		35

Address to write (points to 9001 in Output_PKE)

Write command (points to 2 in Output_R/W)

Value to write (points to 35 in Output_PWE2)

We can check the result

"Input_PKE":P	%IW256:P	DEC_unsigned	9001
"Input_R/W":P	%IW258:P	DEC_unsigned	2
"Input_PWE1":P	%IW260:P	DEC_unsigned	0
"Input_PWE2":P	%IW262:P	DEC_unsigned	35

We have ATV71 cyclic communication OK. The NCAX and NMAX can be used inside a program.

It's also possible to manage the PKW in order to read and write other drive parameters.
